About this Dashboard

What it shows: Where a business makes and loses money, across profit concentration, pricing and discounts, and customer retention.

Profit finding: 14 of 17 sub-categories make money. Three lose money: Tables, Bookcases and Supplies. Profit is concentrated in a few top performers, led by Copiers, Phones, Accessories and Paper.

Things to know:

- Profit comes pre-calculated, with no cost of goods or fee breakdown.
- The Pareto line can pass 100% because some sub-categories lose money.
- Recent customer cohorts have blank or lower cells because they haven't had time to come back.

Dataset: Superstore, Kaggle. 9,994 order lines, 793 customers (It is synthetic data).

Built with: Power BI, Power Query, DAX

Want this for your shop?

Send me your orders export (Etsy, Shopify or similar) and I'll build a version for your business.
